

## Core Maths

These diagrams are called population pyramids.

Using the population pyramids, state two differences between the population of China and India.

# Core Maths

Whether you're experienced or new to teaching Core Maths, the AMSP is an excellent source of information, professional development and resources. We can also provide advice and practical support to help your school or college to start offering it.

Our professional development includes online courses (live and on-demand), face-to-face courses, and conferences. We also arrange local teacher network

meetings, providing opportunities to share and discuss good practice and new ideas with other Core Maths teachers. These are all free or low-cost and, in some cases, subsidised.

We offer a free online platform providing extensive free resources for you and your students to use. It's tailored to each of the AQA, Edexcel and OCR Core Maths specifications, and enables you to track students' progress.

For professional development opportunities, classroom resources and curriculum guidance visit [amsp.org.uk](https://amsp.org.uk)
