Maths for future careers

**How many slices of bread does the average
British person throw away in a lifetime?**

Maths for future careers

Did you know that answering estimation questions can help you get your dream job? Questions like this are often asked at interview to see how you deal with what seems to be an impossible question by breaking it down into smaller questions that you know something about.

Estimation questions can be fun to try and solve! More importantly they

demonstrate your ability to think critically, be creative, simplify complex situations, reason, problem solve and communicate. These are all key skills that employers are looking for.

Studying maths beyond GCSE helps you develop those skills and increases your chances of getting a place at university or a job in a wide variety of careers.

For more information on your options for studying maths beyond GCSE, visit amsp.org.uk/students/gcse/what-next
